**Abstract:** This is notify to all the human race about the mystery of universe. The earth is always variable, the high significant picture of the world is very painful, different kinds of violence, natural disaster and others difficulties is existing . It is the question of the situation. How can the people will be able to survive from the against position?

At one time earth will be extreme heated and after the earth will be inundate, this was also recorded in ancient book, some of the island have become off for swelling of water. Earth has become a fire-box.

Sun is the central object of the solar system , it is made up of different gases , chemical composition of the sun have growth gradually so in any time the sun's core would be explosion and it will make a solar cyclone. Many forest region have been burned to ashes because there have made up of huge gaseous interaction .

At now we have prone to plant cutting festive buy not response in any planting ,where as everyone knows, one plant is protective for one life. This is only remedy to survive from all difficulties , psycho physical co-ordination treatment, if any man can integrate his own entire complex(passion) at one line, then he will be enable to inner vision. (spiritual insight).

**Keywords:** Atmosphere of sun, Distasting, Explosion, Science, Survive,

---

### I. Introduction

I have listen in my childhood , that at one time the staying of the earth will be changing in different way, some of the status are given below:-

Firstly, earth will be maximum heated and earth will become off waterless and after then many region of the earth will be inundate, moreover, different kinds of natural disaster will be happened in step by step.

I was thought at that time, that this was making of man's story but I have seen subsequently, many statement have been recorded about future world in ancient book, which is noticeable recently. What happened in the infinite universe and what will happen tomorrow, it is always searchable although science could not discovered all thing about universe still now.

Earth is always changing in rotatively , once upon a time the man was ignorant, uncultured, gradually they have enable to a acquire in civilization, but it is truth that yet we are not available about the sense of whole universe.

At one time men had been used to metallic utensil, which have made of gold , silver copper, brass etc. Which treats of the preservation of health , as far as man should followed to the natural system, otherwise where is production and there is destruction----- it will be true. In the mean time, many countries had use botanical termagant because it is proved that it is not so harmful for human body.

How the world is running , at this point men should be more conscious . As the case the earth has been heated and solar flares, the most powerful explosion in the solar system , it can equal the intensity of 1 billion hydrogen bombs. So we should thought about the ejecting huge masses of hot materials that can travel across space to disrupt earth's neighborhood.

### II. Unexpected Contrariety And Rotary Universe

Most of the people have known the world is always changing in rotational way. The recent situation of the world have signified, that different kind of violence and various type of natural disaster is now existed. So this is very important matter of thought under the circumstances.

I have listen in my childhood and that was recorded in ancient book at one time , earth will be waterless and excessive temperature will be increased. Many island will become off for swelling of water and many countries will be inundate and appeared many difficulties. Recently, earth have become of extreme heat in day by day and for this reason many ice land have been liquated , so water level of the sea have been growth, therefore flood is inevitable. This was known of almost people, but what is unreliable truth, that is the point of this issue.\

Gasolier Mass

Gasolier Explode Mass for Huge

It was proved that the sun is a big ball of gases; it is the central object in the solar system, it is made up of different gases, the sun is the richest source of electromagnetic energy in the solar system (mostly in the form of heat and light). This is more better to say about the chemical composition of the sun; incase chemical composition is highly enriched and then sun will become Of misbalance in that case earth will be appear to tremendous danger and it will make a solar cyclone, so men have to conscious and keep our mind, the sun will be explode and divided into the many portion, because large quantity of gases growth in the inner part of the sun and the earth and solar system would be destroyed. Unlike tornadoes on earth, which are powered by differences in temperature and humidity the twisters on the sun are combination of hot flowing gas and tangled magnetic field lines, ultimately drive by nuclear reaction in the solar core.

Earthquake, flood, cyclone, excessive rainfall and different kind of diseases will be released to the world, everything depends upon the atmosphere of sun because this is the star, that is the central object of solar system. It is made up of 92% hydrogen, almost 8% helium gas and rest is assorted elements. In future gas would be blown out the sun's nuclear and subsequently, the new mass of gases would be appear in the universe. Every planet has a lot of electronic magnetic power. It has drawnd to each and every one by their electronic magnetic power, at any time, someone may be damaged by the other planet, even many asteroid would be born newly into the universe. Although scientists have tried to discover about planetary system more and more. Where any friction is occur between two things, then there are produced heat and electronic energy. Nothing is restful in the world, everything is moving. Gases are moving in the sun's core and friction with one another, so therefore huge bubble of gas erupting from the sun. Men should be control from combustibility, anything that will take fire and burning air pollution is supported by extreme gas productivity and this pollution brings different loss.

Huge population is the highest cause of air pollution, moreover industrial improvement is not healthy for everywhere. Every human body is like a machine, when a machine give up his useless elements and mixed into the air contact that are making different pollution. Man's breathing is like that. Man has taken fresh air and sent out of the body, which is carbon dioxide and harmful.

At present we have seen in the world the many forest region have been burn out. It is happening for the action of gaseous, there are promoted any combustible, (anything that will take fire and burn) .As much the earth will be heated and as such the world will be fulfilled to the gases.

Damage others Planetary System

A huge bubble of gas erupting from the sun over the Course of several hours at the maximum point of the solar cycle . Solar flares, that most powerful explosion in the solar system can equal the intensity of 1 billion hydrogen bombs. The sun's warmth make life on earth possible, but our home star can also be dangerous flaring up and ejecting huge masses of hot material that can travel across to disrupt earth's neighborhood. If one of those huge masses hits the earth, then a disturbance in the earth magnetic field, it is called a geomagnetic storm results, a powerful storm could damage electrical systems cause power blackouts, knockout radio communications and disrupt earth orbiting satellites.

The name of the earth of the planet is moving in extreme speeds in its own orbit line and according to law of continuation moving, earth is losing his weight gradually, ultimately earth have been destroyed day by day at small degrees and for this reason sky will be covered by the fog of the name of comet, which have made up from dust and different elements. So many kinds of disrupt will be appear upon the man kinds and at the same time, gravitation of the earth will be reduced and the cause of less magnetic power of the earth, everything in the surface of the earth will be loss connection with the earth and there for many disorders will appears in public life.

### **III. Survive From Disastrous**

Firstly man should followed to the natural system at present, we are prone to plant cutting festive but not response in any planting whereas every one knows that one tree is protective for one man. If we think attentively many information have come out in our front. have seeing the animal world with analytically, that dogs and cats one and different animals sensible then mans, the power of feeling is to much, so people have to observing to their life work. Why I am writing this sentence, do think about the past incident of tsunami which happened before few years ago. When the Andaman island and Indonesia was devastated by tsunami, almost people have known how and what happened there situation. Suddenly have seen at that time, many native male and females were left their place, they had been looked, suddenly different animals have run away from the forest and they understood something wrong have came in their life, because they have known that animals are not going for nothing and for this reason, they were saved at that time. Each and every thing is indispensable in man's life anything is not worthless.

Once upon a time, the many devotees had been practiced by the divine worship and they could understood many difficulties before the wrong situation. Now it is the question, how and what is this method? This name of psycho physical co-ordination procedure, if the man can be able to maintain their talking, thinking and doing with harmonized they will be capable to the multiplex transcendentalism, to integrate our own entire passion at one line, then it is possible for human being. This is the mannerism of psycho physical co-ordination performance and this is called in inner vision (spiritual insight).

It is easy to say but difficult to do because, this is a culture like religious austerity. Only it can be possible when the men loved and attached to superior, then it will be possible easy. One thing is important to keep our mind, nature does not tolerate any egoism and there for one by one age have been destroyed from time to time, so many records have been listed in the past history.

#### **IV. Conclusion**

Science advanced according to his own systematic way, but scientist did not going on throughout observation, that is the problem of science culture. As a example, one scientist could discovered about fertilized and worm destroying drug, but did not discovered anti reaction, which have made different loss for human being.

The nature of science is only act for creating, this is not influenced by any matter, situation and surrounding are making his profile, but when science dominated by third elements and only then, science may be imprecated. The source of pleasant is creativity, when one scientist has been attached to the ideal and simultaneously and he has been cultivated by science, then he will make able to a real scientist. Being is always honest sensation associated full of joy, always dishonest preventive and which is fulfillment of being, that is called religion and religion means, which have taken from realization. It is better to keep our mind that which we have done for the time being, the consequence of one's action do not excuse anybody, that is better or wrong, whatever happens.
